HAFIZ UZAIR ASHRAF

Software Architect · AI Engineering Lead · Senior Full-Stack Engineer

Islamabad, Pakistan (open to USA/UK/EU relocation + sponsorship) · +92 335 1314141 · uzair.m.ashraf@gmail.com · uzairashraf.com · LinkedIn · GitHub

PROFESSIONAL SUMMARY

Software Architect with 9+ years building and leading fintech and enterprise products end-to-end — .NET backends, Angular/React front ends, and the Azure DevOps pipelines that ship them. Progressed from full-stack engineer to Team Lead to Architect on payment-processing and card-issuing platforms serving Latin American markets — processing 1M+ transactions per day — engineered in PCI DSS–scoped environments and integrated directly with Mastercard, VISA, AMEX and CLAVE. Now supervising AI coding agents through a full rebuild of the payment-platform core, owning the delivery gates that decide what ships.

CORE SKILLS

Languages: C#, TypeScript, JavaScript, SQL

Backend: .NET / .NET Core (through .NET 10 LTS), ASP.NET Core Web API, EF Core, Dapper, ABP.IO, SignalR, Node.js

Frontend: Angular, React, React Native, Ionic, HTML/CSS, Bootstrap

Architecture: Clean Architecture, Modular Monolith, Domain-Driven Design, Microservices, CQRS, Event-driven, REST APIs

Payments & Compliance: PCI DSS–scoped engineering, secure card-data handling, card-network integrations, transaction processing / clearing / settlement

AI Engineering: Supervising AI coding agents in production delivery, LLM/RAG integration, agentic workflows, Azure OpenAI / Claude, Semantic Kernel, LangChain, .NET Aspire

Data & DevOps: MS SQL Server, MongoDB, Azure DevOps CI/CD, Azure Service Bus, RabbitMQ, Kafka, Git, production support

PROFESSIONAL EXPERIENCE

Software Architect — **CROEM (Pvt.) Ltd.** (Fintech, ~100 employees)

Jan 2024 – Present · Islamabad

- Lead architecture and technical strategy for payment platforms processing **1M+ transactions per day** — microservices, event-driven architecture (Azure Service Bus, RabbitMQ, Kafka), CQRS, DDD.
- **Supervise AI coding agents delivering a full rebuild of the payment-platform core.** The agents prepare changes; I run the CI-equivalent gates and decide what ships. Delivery is organised as successive conformance waves against a design specification, with money-movement features gated behind finance and security sign-off.
- Own the delivery process end to end: branch model, an automated review policy applied to every pull request with the reviewers themselves audited weekly, handoff documentation, and a bilingual (English/Spanish) PMO control tool for the partner delivery programme — critical-path Gantt, escalation tracking and client reporting.
- Integrate AI/LLM capabilities into production systems: RAG pipelines, AI chatbots and autonomous agent workflows (Azure OpenAI, Claude, LangChain, Semantic Kernel, vector databases).
- Own technology selection, coding standards and architecture reviews in **PCI DSS**–scoped environments; mentor cross-functional teams.

Senior Full-Stack Software Engineer / Team Lead — **CROEM (Pvt.) Ltd.**

Jan 2019 – Dec 2023 · Islamabad

- Led a development team across requirements, code review, deployment and real-time production support for card-issuing and acquiring platforms across Latin America.
- Led a transaction-processing initiative that cut processing time **~20%**, improving system efficiency and client satisfaction.
- Built secure, compliance-aware financial systems with Clean Architecture, Modular Monolith and DDD patterns.

Full-Stack Software Engineer — **FUTURESOL**

Feb 2017 – Dec 2018 · Islamabad

- Built an ERP solution from scratch through to production release using .NET; delivered front end, back end and the MS SQL database design.
- Drove a stability initiative (rigorous testing + debugging) that reduced post-release issues **~30%**.

KEY PROJECTS

NeoCore V2 — full rebuild of the payment-platform core (gateway, issuing, acquiring), delivered by AI coding agents under supervision. Design project as single source of truth; automated design-vs-build check gating every screen; eight conformance waves and three resync rounds merged to date.

.NET · React Native · AI agent supervision · design conformance · Azure DevOps

Wa! / MI Wallet — card-issuing wallet (Panama). Benefits reception, savings accounts, bill pay, QR withdrawals at 1,000+ stores.

.NET 8 API · DDD/ABP.IO · EF/Dapper/SignalR · Ionic-Angular · React · SQL Server · Azure DevOps

NeoGateway — US-based transaction-acquiring engine. eCommerce, POS, IVR, SDK and API; integrated directly with Mastercard, VISA, AMEX, CLAVE; 10+ years in production across LATAM, from processing through clearing and settlement.

.NET Framework 4 → .NET Core 3.1 · MVC/MVVM/DDD · Angular · SQL Server · Azure DevOps

MiCedulad — award-winning COVID-19 citizen-assistance platform (Panama).

.NET Core 3.1 · DDD · Ionic-Angular · React · Azure DevOps
