PROFILE

Software Architect with 9+ years building and leading fintech products end to end. Progressed from engineer to Team Lead to Architect on card-issuing and transaction-acquiring platforms serving Latin America — **1M+ transactions a day**, PCI DSS–scoped, integrated directly with Mastercard, VISA, AMEX and CLAVE. Now supervising AI coding agents through a full rebuild of the payment-platform core, owning the gates that decide what ships.

CORE SKILLS

Languages	C#, TypeScript, JavaScript, SQL
Backend	.NET / .NET Core (to .NET 10 LTS), ASP.NET Core Web API, EF Core, Dapper, ABP.IO, SignalR, Node.js
Frontend	Angular, React, React Native, Ionic, HTML/CSS, Bootstrap
Architecture	Clean Architecture, Domain-Driven Design, Modular Monolith, Microservices, CQRS, Event-driven, REST
Payments	PCI DSS–scoped engineering, secure card-data handling, card-network integration, processing / clearing / settlement
AI Engineering	Supervising AI coding agents in production delivery, LLM/RAG integration, agentic workflows, Azure OpenAI, Claude, Semantic Kernel, LangChain
Data & DevOps	SQL Server, MongoDB, Azure DevOps CI/CD, Azure Service Bus, RabbitMQ, Kafka, Git

EXPERIENCE

Software Architect CROEM (Pvt.) Ltd. — Jan 2024 – Present · Islamabad

- Lead architecture and technical strategy for payment platforms processing **1M+ transactions a day** — microservices, event-driven architecture, CQRS and DDD.
- **Supervise AI coding agents rebuilding the payment-platform core.** Agents prepare changes; I run the CI-equivalent gates and decide what ships — delivered as successive conformance waves against a design specification, with money-movement features gated behind finance and security sign-off.
- Own the delivery process: branch model, an automated review policy applied to every pull request with reviewers audited weekly, and handoff documentation.
- Designed a bilingual English/Spanish PMO control tool for the partner delivery programme — critical-path Gantt, escalation tracking and client reporting.
- Own technology selection, coding standards and architecture review in **PCI DSS**–scoped environments; mentor cross-functional teams.

Senior Full-Stack Engineer / Team Lead CROEM (Pvt.) Ltd. — Jan 2019 – Dec 2023 · Islamabad

- Led the team across requirements, code review, deployment and live production support for card-issuing and acquiring platforms across Latin America.
- Led a transaction-processing initiative that cut processing time **~20%**.
- Built secure, compliance-aware financial systems on Clean Architecture, Modular Monolith and DDD.

Full-Stack Software Engineer FUTURESOL — Feb 2017 – Dec 2018 · Islamabad

- Built an ERP solution from scratch to production release — front end, back end and MS SQL database design.
- Drove a stability initiative that reduced post-release issues **~30%**.

SELECTED PROJECTS

NeoCore V2 · PLATFORM REBUILD

Full rebuild of the payment-platform core — gateway, card issuing and acquiring — delivered by AI coding agents under my supervision. The design project is the specification rather than a reference: screens are ported into the web application and re-synced as the design evolves, and an automated design-vs-build check gates every screen before it can merge. Delivery runs as successive conformance waves with periodic resync rounds instead of a single cutover. Eight waves and three resync rounds merged to date.

.NET · React Native · AI agent supervision · design conformance · Azure DevOps

Wa! / MI Wallet · CARD ISSUING, PANAMA

Prepaid card-issuing wallet for the unbanked: benefits reception, savings accounts, bill payment and cash withdrawal by QR code at **1,000+ merchant locations**. Modular-monolith API so card-issuing, wallet-ledger and merchant-QR modules evolve independently inside one PCI DSS–scoped boundary, with real-time balance and transaction-status push to the mobile clients.

.NET 8 API · DDD / ABP.IO · EF / Dapper / SignalR · Ionic-Angular · React · SQL Server

NeoGateway · ACQUIRING ENGINE, USA

Transaction-acquiring engine taking a card payment from any channel — eCommerce, POS, IVR, partner SDK or API — through authorization, clearing and settlement. Channel adapters translate into one canonical transaction domain, so routing and reconciliation stay centralised instead of duplicated per channel. Integrated directly with Mastercard, VISA, AMEX and CLAVE; **10+ years** in continuous production across Latin America through a .NET Framework 4 → .NET Core migration.

.NET Core · MVC / MVVM / DDD · Angular · SQL Server · Azure DevOps

MiCedulad · CIVIC, PANAMA

Award-winning COVID-19 citizen-assistance platform built for Panama, distributing state aid nationally during the pandemic.

.NET Core 3.1 · DDD · Ionic-Angular · React · Azure DevOps
